Sriram Harshit

Software Developer | Full Stack Developer

Portfolio: port-folio-eta-ruby.vercel.app Hyderabad, India

sriramharshit4859@gmail.com +91 95736 01488 github.com/Sriram-Harshit linkedin.com/in/sriram-harshit

Professional Summary

Computer Science graduate and Full Stack Developer specializing in MERN stack and Python with experience in scalable web applications. Strong in Data Structures, Algorithms, REST APIs, and database design with focus on backend engineering and system design. Skilled in end-to-end development, debugging, and deployment.

Skills

Languages: Python, JavaScript, SQL, HTML5, CSS3

Frameworks & Technologies: React.js, Node.js, Express.js, Django, REST APIs, API Design

Databases: MySQL, MongoDB, SQLite, Database Design, Query Optimization, Indexing

Tools & Platforms: Git, GitHub, Postman, VS Code, Linux, Version Control, Debugging, Deployment

Core Competencies

Software Development, Web Development, Backend Development, Frontend Development, REST API Development, System Design, Database Design, Debugging, Testing, Deployment, Problem Solving, Analytical Thinking

Projects / Experience

E-Commerce Marketplace (MERN) *TheStore*

- Developed a full-stack MERN marketplace with dedicated customer, seller, and admin portals, implementing JWT authentication and role-based access control.
- Built RESTful APIs for product management, inventory, reviews, and orders, using Redux Toolkit for centralized state management and consistent UI updates.
- Implemented an AI-powered shopping assistant, technical product specifications, and stock-aware cart calculations to enhance product discovery and shopping workflows.
- Optimized frontend performance with reusable UI components, protected routes, and efficient API handling to improve responsiveness and maintainability.

OmniAnalytics — E-Commerce Analytics (Django) *Dashboard*

- Developed and deployed a Django analytics platform processing 99,400+ Olist marketplace records across nine relational datasets to analyze business KPIs and customer behavior.
- Optimized data pipelines using Pandas, NumPy, and pre-aggregated JSON caching, reducing measured initial dashboard latency from 12.5 seconds to under 100 milliseconds.
- Built eight interactive Chart.js visualizations and integrated a Scikit-learn delivery-delay classifier, with automated tests covering analytics, data integrity, and API behavior.

Digital Health Wallet *DHW*

- Built a full-stack healthcare application using React, Node.js, Express.js, and SQLite to manage medical records and vital signs.
- Implemented JWT authentication, bcrypt password hashing, and protected REST APIs to secure user access and healthcare data.
- Developed vital-sign tracking and medical report uploads using Multer, with a responsive Recharts dashboard for visualizing health metrics.

Education

Malla Reddy Institute of Engineering and Technology *2020 – 2024*

B.Tech in Computer Science Engineering

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks
